DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 7, 11, and 12 have been considered but are moot in view of the new ground(s) of rejection.

The Examiner acknowledges the cancellation of claims 9 and 10.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 7-8, are rejected under 35 U.S.C. 102(e) as being anticipated by Fotouhi (U.S. Pub. 2003/0169068).

Regarding claim 7, Fotouhi discloses a first terminating resistor (R1 @ Fig. 2) and a second terminating resistor (R2) between the two wires (RTIP & RRING) of the two-wire line, where the first (R1) and second (R2) terminating transistors are connected in series (Fig. 2); and at least one switching arrangement (M1) provided

Art Unit: 2819

between the first and second terminating resistors (par. 0090, lines 1-3), where the at last one switching arrangement is configured to selectively separate the first and second terminating resistors (par. 0025, lines 1-5 & par. 0010, lines 3-7) from the two-wire line.

Regarding claim 8, Fotouhi discloses where switching logic for triggering the at least one switching arrangement as a function of an input signal (par. 0025, lines 10-12).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 11, is rejected under 35 U.S.C. 103(a) as being unpatentable over Fotouhi (U.S. Pub. 2003/0169068) in view of Funaba (U.S. Pat. 6,853,213).

Regarding claim 11, Fotouhi discloses that of claim 8, but fails to teach the switching arrangement input signal generated by an arithmetic function block.

Funaba discloses in Input/Output circuit, Reference-Voltage Generator, and Semiconductor IC, where input to switching and termination circuit (15 @ Fig. 2) is generated by arithmetic control circuitry (20), therefore it would have been obvious to one of ordinary skill in the art at the time of invention to use the termination circuitry

Art Unit: 2819

disclosed by Yang and the arithmetic control taught by Funaba for accelerated switching and accurate signal termination of a input/output circuit.

Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yang (US 6,836,144) in view of Teggatz et al. (US 6,324,044).

Regarding claim 12, Yang discloses the input output circuit of claim 7, but fails to disclose the differential signals as lines of a CAN bus.

Teggatz discloses in Driver for Controller Area Network, differential CAN bus signals (CAN-H & CAN-L @ Fig. 3), therefore it would have been obvious to one of ordinary skill in the art at the time on invention to use the termination circuitry disclosed by Yang with the CAN bus taught by Teggatz for its high speed performance and signal integrity.

Conclusion

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2819

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
